The "Test Generator"

Comparison of ws and WebSocket-Node

Updated Architecture Proposal

Conclusions and Future Work

Questions

- ▶ WebSocket-based clients require:
 - ▶ constant memory (AJAX-based: increasing rates!) [3]
 - ▶ 50% less network bandwidth [3]
- ▶ for 2B of data per frame exchanged by WebSockets, AJAX exchanges up to 8KB of HTTP headers [4]

- Advantages:
 - profiling flexibility
 - platform independent

The "Test Generator"

Comparison of ws and WebSocket-Node

Updated Architecture Proposal

Conclusions and Future Work

Questions

- ▶ Architectural goals:
 - ▶ several WebSocket clients
 - ▶ all kinds of stress testing scenarios
 - ▶ assess CPU, RAM and network throughput
- ▶ Final implementation:
 - ▶ **ws** and **WebSocket-Node** as clients (from Node.js)
 - ▶ obtain CPU and Memory Consumption using the **Look** profiler for Node.js apps [5]

- ▶ Testing scenarios included:
 - ▶ 4 new clients/second, minimal data
 - ▶ 600 new clients/120 seconds, minimal data
 - ▶ 100 clients, exchanging data starting at 2KB, up to 1MB (+2KB/s)
 - ▶ 400 clients, minimal data, close connection, add 200 clients. repeat

The "Test Generator"

Comparison of ws and WebSocket-Node

Updated Architecture Proposal

Conclusions and Future Work

Questions

Testing Scenario 1

CPU time - ws

CPU time - WebSocket-Node

Node RSS - ws

Node RSS - WebSocket-Node

Testing Scenario 2

CPU time - ws

CPU time - WebSocket-Node

Node RSS - ws

Node RSS - WebSocket-Node

Testing Scenario 3

CPU time - ws

CPU time - WebSocket-Node

Node RSS - ws

Node RSS - WebSocket-Node

Testing Scenario 4

CPU time - ws

CPU time - WebSocket-Node

Node RSS - ws

Node RSS - WebSocket-Node

- ▶ relatively equal performance with fewer connections and small data frames (slightly better results for **ws**)
- ▶ **WebSocket-Node** scales much better both with number of connections and frame size

First half (recap)

The "Test Generator"

Comparison of ws and WebSocket-Node

Updated Architecture Proposal

Conclusions and Future Work

Questions

- ▶ Core ideas:
 - ▶ learning and also using a new API can be painful
 - ▶ users would prefer a "black-box" evaluation framework
- ▶ An alternate design:

The "Test Generator"

Comparison of ws and WebSocket-Node

Updated Architecture Proposal

Conclusions and Future Work

Questions

- ▶ two architectural proposals
 - ▶ one is more flexible, but comes in the form of a library
 - ▶ the other is a fully independent app which offers quick results
- ▶ very likely to become a popular choice in this field
